

Grow your own Potatoes

AUSTRIAN CRESCENT:

(Yellow) Large **fingerling** potato with a golden-yellow flesh that's buttery and delicious. Potatoes may reach up to 10" in length at full maturity. *Solanum tuberosum*. Indeterminate. Mid to late season, 90 - 100 days to maturity.

CAL WHITE:

(White) California White is a long, white fleshed potato with **white** skin. It produces heavy yields of large potatoes. Early-season, 60-80 to maturity.

CHIEFTAIN:

(Red) With their thin, **red** skin and brilliant white flesh, these Chieftain Red Potatoes are delicious boiled (they hold up well, as they're on the waxier side) or roasted. 65 - 70 days to mature.

COSMIC GOLD:

(Yellow) A new variety similar to Yukon Gold, but more disease resistant. 65 - 80 days to mature.

PURPLE MAJESTY:

(Purple) Oval with **purple/blue** flesh, they keep their rich color when cooked. Pigmented potatoes like Purple Majesty have been linked to decreased oxidative stress, inflammation, and improved immune status. 70 - 80 days to mature.

RED THUMB:

This oblong variety flaunts a beautiful rose colored skin with a pink starburst in yellow flesh that is succulent, firm and waxy. High yield of medium sized **fingerlings**. It is a perfect fit for the fresh, and gourmet market as it has a robust, buttery flavor and holds great color when cooked. 90-110 days to mature.

RUSSIAN BANANA

(Yellow) Banana **Fingerling** is an Heirloom variety displaying smooth light yellow skin and flesh. This variety has great flavor and is a favorite among chefs and in the gourmet market. It is susceptible to PVY, but boasts high resistances to common scab with a high tuber set. 100 - 135 days to mature.

UMATILLA:

(Russet) Umatilla potatoes are a late season maturing potato that are long and large with yellow skin and **white** flesh. They are great for baking, hash browns, or frying. 100 - 110 days to mature.
